

Our Computing Curriculum Vision

At Newick Primary School, it is our vision that every child become a WICK learner and we aim to enrich their development through the teaching of a broad and balanced computing curriculum that inspires creativity and develops digital literacy, providing all our children with the key life skills to become competent in an ever-changing technological world. It is our intent that our pupils have the opportunity to demonstrate that they are independent learners and resilient technology users, equipped to move up onto the next stage of their educational journey.

Every Newick Primary pupil will learn how to navigate the online digital world, whilst learning how to keep safe and being kind to others online.
